Walter R. Borg
Dedicated to All Our Students
PART I: Introduction 1
1. The Nature of Educational Research 2

PART II: Planning a Research Study 35
2. Developing a Research Proposal 36
3. Ethical, Legal, and Human Relations Issues in Educational Research 62
4. Reviewing the Literature 99

PART III: Research Methods 123
5. Statistical Techniques 124
6. Selecting a Sample 163
7. Collecting Research Data with Tests and Self-Report Measures 188
8. Collecting Research Data with Questionnaires and Interviews 221
9. Collecting Research Data through Observation and Content Analysis 253

PART IV: Quantitative Research Design 287
10. Nonexperimental Research: Descriptive and Causal-Comparative Designs 288
11. Nonexperimental Research: Correlational Designs 319
12. Experimental Research: Designs, Part 1 365
13. Experimental Research: Designs, Part 2 401
Brief Contents

PART V: Approaches to Qualitative Research 433
14. Case Study Research 434
15. Qualitative Research Traditions 475
16. Historical Research 513

PART VI: Applications of Research 540
17. Evaluation Research 541
18. Action Research 578
## Contents

*Preface* xxvii

*About the Authors* xxi

### Part I: Introduction

1. The Nature of Educational Research 2
   - Contributions of Research to Knowledge about Education 3
     - Description 3
     - Prediction 4
     - Improvement 4
     - Explanation 6
     - Uses of Theory 7
     - Approaches to Theory Development 8
     - Example of Theory Testing 8
   - Application of Research to Educational Practice 10
   - Limitations of Research Knowledge 10
   - The Importance of Basic Research 11
   - Funding for Educational Research 12
   - Epistemological Issues in Educational Research 13
     - Objective Reality and Constructed Reality 14
     - Constructed Realities in Research 16
     - Cases and Populations 17
     - Numerical and Verbal Representations of Social Reality 19
     - Mechanical, Interpretive, and Structural Views of Causation 21
   - Quantitative and Qualitative Research 23
     - Example of Quantitative/Qualitative Research Complementarity 25
     - Arguments against Quantitative/Qualitative Research Complementarity 26
   - Postmodern Criticism of Scientific Inquiry 27
   - Response to Postmodern Criticism 29
   - Learning How to Do Educational Research 32
   - Self-Check Test 33

PART II: Planning a Research Study

2. Developing a Research Proposal 36
   Introduction 37
   Identifying a Research Problem 37
      Reading the Research Literature 38
      Doing Theory-Based Research 40
      Example of Theory-Based Research 40
      Advantages of Theory-Based Research 41
   Replicating and Extending Previous Research 42
   Working on a Team Project 44
   Preparing a Research Proposal 45
      Introductory Section 45
      Research Hypotheses 45
      Research Questions and Purposes 46
   Literature Review Section 47
   Research Design Section 48
   Research Methods Section 48
   Data Analysis Section 49
   Protection of Human Subjects Section 49
   Time Line Section 49
   Conducting a Pilot Study 50
   Using the Proposal in Writing the Dissertation 51
      Format 51
      Front Matter 53
      Introductory Chapter 53
      Literature Review Chapter 53
      Research Methods Chapter 54
      Results Chapter 54
      Discussion Chapter 56
      Back Matter 57
   Preparing a Journal Article 57
   Preparing a Paper for a Professional Meeting 59
   Recommendations for Planning and Reporting Research 60
   Self-Check Test 61

3. Ethical, Legal, and Human Relations Issues in Educational Research 62
   Introduction 63
   Examples of Ethical Problems in Educational Research 63
PART III: Research Methods

5. Statistical Techniques 124
The Use of Statistics in Educational Research 125
Example of Statistical Analysis in a Research Study 125
The Need for Judgment in Statistical Analysis 126
Acquiring Statistical Expertise 128
Types of Scores 128
Continuous Scores 128
Age and Grade Equivalents 129
Standard Scores 129
Rank Scores 130
Categories 130
Contents

Computer Software 159
Computer Consultants 159
Checking Data Analyses for Accuracy 159
Storing Research Data 160
Recommendations for Doing Statistical Analyses 160
Self-Check Test 161

6. Selecting a Sample 163

Introduction 164
Sampling Logic 164
  Population Validity 164
  Purposeful Sampling 165
  Replication Logic 166
Sampling Techniques in Quantitative Research 167
  Defining the Population 167
    Target and Accessible Populations 167
    Inferential Leaps from a Sample to a Population 169
  Probability and Non-Probability Sampling 170
Simple Random Sampling 171
  Random Number Generators 171
  Example of Simple Random Sampling 172
Systematic Sampling 173
Stratified Sampling 173
Cluster Sampling 174
Convenience Sampling 175
  Example of a Convenience-Sample Description 175
  Use of Inferential Statistics with Convenience Samples 176
Estimating an Adequate Sample Size 176

Sampling Techniques in Qualitative Research 177
  Types of Purposeful Sampling 178
  Opportunistic Sampling 181
  Estimating a Desirable Number of Cases 181
Volunteers in Sampling 182
  Characteristics of Research Volunteers 182
    Volunteer Characteristics in Research Requiring Parental Consent 183
    Example of Checking Volunteer Characteristics 184
  Improving the Rate of Volunteering 185
Recommendations for Selecting a Research Sample 186
Self-Check Test 186
7. Collecting Research Data with Tests and Self-Report Measures 188

Measurement in Educational Research 189
Characteristics of a Good Test 190
Criteria for Judging the Quality of Tests 190
Test Validity 191
  Evidence from Test Content 191
  Evidence from Response Processes 192
  Evidence from Internal Structure 193
  Evidence from Relationship to Other Variables 193
  Evidence from Consequences of Testing 194
Test Reliability 195
  Alternate-Form Reliability 197
  Test-Retest Reliability 197
  Internal Consistency 197
  Inter-Tester Reliability 198
  Generalizability Theory 198
  Standard Error of Measurement 199
Item Response Theory 200
  Assumptions of Item Response Theory 200
  Advantages of Item Response Theory 201
  The Mathematics of Item Response Theory 201
Approaches to Measurement 203
  Standardized and Locally Constructed Tests 203
Referencing of Test Scores 204
  Norm-Referenced Measurement 204
  Criterion-Referenced Measurement 206
  Individual-Referenced Measurement 207
Computer-Based Testing 207
  Uses in Test Development 207
  Uses in Test Administration, Scoring, and Interpretation 208
Individual and Group Tests 208
Types of Tests and Self-Report Measures 209
Performance Tests 209
  Intelligence Tests 209
  Aptitude Tests 209
  Achievement Tests 209
  Diagnostic Tests 210
  Performance Assessment 210
Contents

Personality Measures 212
Personality Inventories 213
Projective Techniques 213
Measures of Specific Personality Characteristics 214
Measures of Self-Concept 214
Measures of Learning Styles and Habits 214
Attitude Scales 214
Measures of Vocational Interest 214
Obtaining Information about Tests 215
Preliminary and Secondary Sources 215
The Test Manual 215
The Test Itself 216
The Test Developer 216
Using Tests in Your Research Project 216
Developing Your Own Test 216
Resistance to Tests 217
Testing in Field Sites 218
Gaining the Cooperation of Test-Takers 218
Recommendations for Using Tests and Self-Report Measures in Research 219
Self-Check Test 219

8. Collecting Research Data with Questionnaires and Interviews 221

Questionnaires and Interviews as Data-Collection Methods 222
Selecting between Questionnaires and Interviews 222
Validity and Reliability Issues 223
Survey Research 223
Steps in Constructing and Administering a Research Questionnaire 224
Step 1: Defining Research Objectives 224
Step 2: Selecting a Sample 225
Step 3: Designing the Questionnaire 226
Anonymity 227
Item Form 227
Measuring Attitudes 228
Web Questionnaires 229
Step 4: Pilot-Testing the Questionnaire 230
Step 5: Precontacting the Sample 231
Step 6: Writing a Cover Letter 231
Step 7: Following Up with Nonrespondents 233
Step 8: Analyzing Questionnaire Data 235
Steps in Preparing and Conducting Research Interviews 236
Step 1: Defining the Purpose of the Interview 237
   Key Informant Interviews 237
   Survey Interviews 237
   Focus Group Interviews 238
Step 2: Selecting a Sample 238
Step 3: Designing the Interview Format 239
   Interview Formats in Qualitative Research 239
   Interview Formats in Quantitative Research 240
   Telephone Interviews 241
   Computer-Assisted Telephone Interviews 241
Step 4: Developing Questions 242
Step 5: Selecting and Training Interviewers 244
   Matching 244
   Respondents as Interviewers 244
   Training of Interviewers 245
Step 6: Pilot-Testing the Interview 246
Step 7: Conducting the Interview 246
   Interviewing Tasks 246
   Recording Interview Data 248
Step 8: Analyzing Interview Data 249
Recommendations for Using Questionnaires and Interviews as Research Instruments 251
Self-Check Test 252

9. Collecting Research Data through Observation and Content Analysis 253
Introduction 254
Procedures for Observation in Quantitative Research 255
   Defining Observational Variables 255
      Types of Observational Variables 257
   Recording and Analyzing Observations 257
   Selecting an Observation Recording Procedure 260
      Standard Observation Forms 261
   Use of Audiotape and Videotape Recorders 261
   Use of Computers and Other Electronic Devices 262
   Selecting and Training Observers 262
      Determining Observer Agreement 263
   Reducing Observer Effects 264
Content:

Procedures for Observation in Qualitative Research 266
  The Purpose of Observation in Qualitative Research 267
  Identifying the Observers and Their Roles 268
  Preparing for Observation 269
  Determining the Focus of Observation 269
  Gaining Entry into the Field Setting 271
  Recording Observations 272
  Dealing with Observer Effects 274
  Analyzing Qualitative Observational Data 275
Nonreactive Observation 275
  Unobtrusive Measures in Quantitative Research 275
    Potential Limitations of Unobtrusive Measures 275
  Qualitative Observation of Material Culture 277

Context Analysis of Documents and Other Communication Media 278
  Content Analysis in Quantitative Research 278
    Steps in Doing a Content Analysis 279
  Analysis of Documents and Records in Qualitative Observation 282

Recommendations for Using Observational and Content-Analysis Methods 285
Self-Check Test 285

PART IV: Quantitative Research Design 287

10. Nonexperimental Research: Descriptive and Causal-Comparative Designs 288

Introduction 289

Descriptive Research Designs 289
  The Purpose of Descriptive Research 289
  Measurement in Descriptive Research 290
  Statistics in Descriptive Research 290
  Description of a Sample at One Point in Time 291
  Longitudinal Description of a Sample 292
    Trend Studies 292
    Cohort Studies 292
    Panel Studies 294
    Cross-Sectional Studies 295

Causal-Comparative Research Designs 295
  The Study of Cause-and-Effect Relationships 295
  Example of a Causal-Comparative Research Study 297
  Planting a Causal-Comparative Study 299
11. Nonexperimental Research: Correlational Designs 319

The Nature of Correlation 320
Types of Scattergrams 320
Positive Correlation 320
Negative Correlation 321
Absence of Correlation 322
The Mathematics of Correlation 322
Correlational Research Design 323
Correlation and Causality 323
Advantages and Uses of Correlational Research 324
Planning a Causal Relationship Study 325
Basic Research Design 325
The Problem 325
Selection of Research Participants 226
Data Collection 326
Data Analysis 326
Problems of Interpretation 328
Contents

Limitations of Causal Relationship Studies  329
Planning a Prediction Study  329
  Types of Prediction Studies  329
  Basic Research Design  330
    The Problem  330
    Selection of Research Participants  331
    Data Collection  331
    Data Analysis  332
Statistical Factors in Prediction Research  333
  Group Prediction  333
  Shrinkage  333
Bivariate Correlational Statistics  334
  Product-Moment Correlation Coefficient  334
  Correlation Ratio  335
  Adjustments to Correlation Coefficients  335
    Correction for Attenuation  337
    Correction for Restriction in Range  337
  Part and Partial Correlation  337
Multivariate Correlational Statistics  339
  Multiple Regression  340
    A Research Example  340
    Steps in a Multiple Regression Analysis  343
    Multiple Correlation Coefficient  344
    Coefficient of Determination  344
    The Mathematics of Multiple Regression  345
    Types of Multiple Regression  346
    Cautions in Using Multiple Regression  347
Path Analysis  347
  Steps in Path Analysis  348
  Path Analysis Models  350
  The Mathematics of Path Analysis  351
  Path Analysis and Theory Testing  352
Factor Analysis  352
  Factor Loadings and Factor Scores  353
  Types of Factor Analysis  354
Structural Equation Modeling  355
Differential Analysis  357
  Subgroup Analysis in Causal Relationship Studies  357
  Moderator Variables in Prediction Studies  358
12. Experimental Research: Designs, Part I 365

Introduction 366
Terminology in Experimental Design 366
Validity Problems in Experiments 367

Internal Validity of Experiments 367
External Validity of Experiments 374
Population Validity 374
Ecological Validity 375
Representative Design 378

Issues in Designing Experiments 379
Experimenter Bias 379
Treatment Fidelity 381
Strong versus Weak Experimental Treatments 383
Random Assignment in Experiments 384

Single-Group Designs 389
The One-Shot Case Study 389
One-Group Pretest-Posttest Design 389
Time-Series Design 391

Control-Group Designs with Random Assignment 391
Pretest-Posttest Control-Group Design 392
Posttest-Only Control-Group Design 395
One-Variable Multiple-Condition Design 397

Recommendations for Doing Experiments 399
Self-Check Test 399

13. Experimental Research: Designs, Part 2 401

Quasi-Experimental Designs 402
Static-Group Comparison Design 402
Nonequivalent Control-Group Design 402

Factorial Designs 404
Two-Factor Experiments 404
Example of a Two-Factor Experiment 404
Three-Factor Experiments 406
Types of Treatment Variables 408
PART V: Approaches to Qualitative Research

14. Case Study Research

Introduction

Characteristics of Case Studies

The Study of Particular Instances
